

BARIATRIC

Bariatric Mortuary Trolley

Bariatric Mortuary Trolley

Fabricated in stainless steel, this customised Mortuary Trolley is designed to meet all the WHS challenges of today's hospital environment.

It features a robust motor drive system that eliminates the manual handling normally associated with the movement of a deceased person from the ward to the mortuary area. The motor drive can also be customised to handle ramps, external foot paths and roads, if required.

The body tray deck is electrically height adjustable to reduce the risk of injury, when laterally transferring to and from the trolley. Several concealment options available, to provide privacy, during transport of deceased patient.

Features:

- Fully customised for access to any design of body tray racks or storage fridges in the mortuary area
- Heavy duty, dual wheel, motor drive system with 'floating' suspension
- Height adjustable body tray deck powered by high capacity scissor lift
- Stainless steel construction
- Deck designed to handle any size of body tray & fitted with rollers for easier movement on and off the trolley
- Electric lift & lower function, for drive wheels, to allow sideways movement in confined spaces
- Fold down or removable side and end rails
- All powered functions located on operator's handle, at head end. Additional hand control pendant available to electrically raise & lower deck
- Operator's handle can also fold up or down, to reduce overall length of trolley
- Several deck concealment options available, including soft privacy covers with or without corner zippers.
- 300kg SWL for standard model. Heavy duty version available with a SWL up to 400kg
