

MANUAL HANDLING

Q2 Roller

The Q2 Roller is an innovative, single patient use, lateral turning device that significantly reduces the manual handling injury risk and time involved in performing hygiene and wound care tasks.

It is comprised of two inflatable chambers that allow the clinician to effortlessly achieve the optimal positioning for patient care and pressure relief from bony prominences, with the assistance of the HoverTech Variable Speed Air Supply.

By eliminating the need for manual handling, the Q2 Roller protects both staff from injury and the patient from friction and shearing associated with traditional methods of repositioning methods.

Features:

- Two independently inflatable chambers for flexible positioning of patient for hygiene and wound tasks
- Quick release valves to improve efficiency
- Breathable fabric prevents moisture build up and enhances patient comfort
- Designed to be inflated using the 'gentle' air flow setting on the HoverTech Variable Speed Air Supply
- Each Q2 Roller comes with a Q2 Pad (absorbent, breathable, cover sheet) This pad is designed to wick moisture away and help control the microclimate of the patient's skin.
- Safe working load of 272kg

Product Code	Product Name	Quantity
MHHT-Q2R-EA	HoverTech Q2 Roller™	Each
MHHT-Q2R-BX5	HoverTech Q2 Roller™	Box of 5
