

Helipad Retrieval / Concealment Trolley

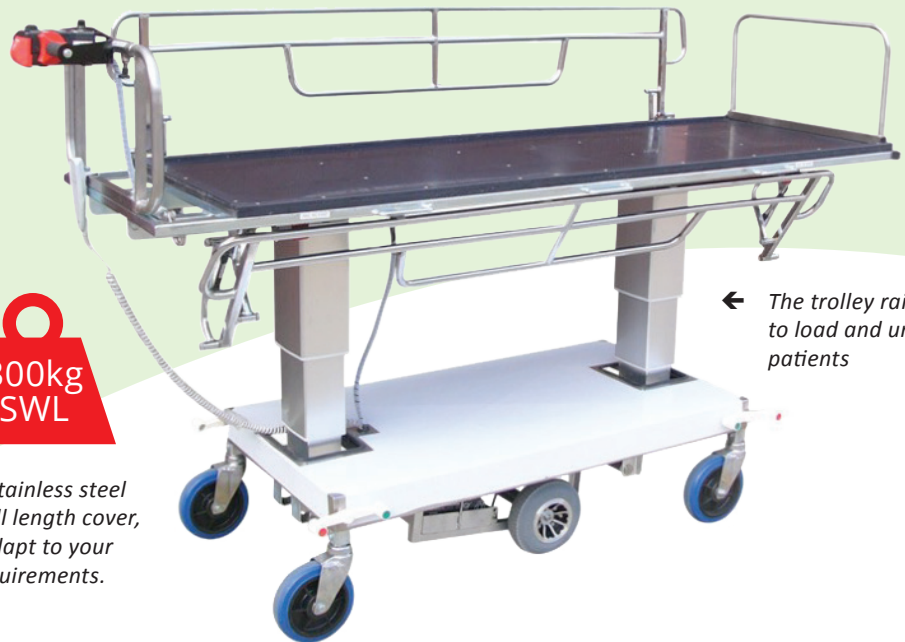

The Helipad Retrieval / Concealment Trolley is designed to achieve ease of transfer from helicopter to trolley. It overcomes difficult terrain, ramps and all types of walkways to and from the heliport.

The MotorDrive system can be raised or lowered with the push of a button to enhance mobility in tight or confined spaces.

The high/low actuators give the bed 400mm of movement, which when tested by Air Ambulance NSW, allowed for direct patient transfer from helicopter to trolley. Drop away side rails and a removable end rail allows for unrestricted access to the patient or trolley surface.

Features:

- Trolley raises to load and unload patients, with a height adjustment range of 640 - 1040mm
- Can be easily adapted to your requirements with the addition of a stainless steel removable top and a full length cover
- Custom built options available
- Heavy Duty 24V Trans-axle MotorDrive system
- 300kg weight capacity
- High impact polymer top surface
- Includes IV pole and Accessory Tray

With the addition of a stainless steel removable top and a full length cover, this trolley can easily adapt to your concealment trolley requirements.
